DISCUSSION

Mr. Grimsley stated that the Village of Aroma Park receives its water from 2 wells, tied together, drawing from dolomite bedrock at 200-500 ft. depth.

The 2 wells are located near the 2 water towers along the RR tracks in Aroma Park. The municipal system serves the population of Aroma Park, approximately 4,000. The southern extent of municipal water distribution is Vanderhaar Rd.

In the near future these wells will be bored deeper because of excessive drawdown of the water table by new irrigation wells in the area. Mr. Grimsley stated that the IEPA has recently done a survey on irrigation in the area.

The homes in Otto Twp. receive their water from shallow, "sand point" wells. These wells are screened in sand & gravel at the soil/bedrock interface.

The Iroquois R. is used for recreation all through Otto Twp.
